EXECUTIVE SUMMARY

AI Automation Specialist with hands-on experience designing intelligent workflow systems, AI-powered business solutions, customer support automation platforms, AI agents, WhatsApp automation, and operational dashboards. Skilled at connecting Large Language Models (LLMs), databases, CRM platforms, and communication systems to create scalable solutions that reduce manual work, improve customer experiences, and increase operational efficiency. I specialize in designing and implementing AI-powered workflows, chatbot solutions, customer support automation systems, and business process automations. My expertise spans automation platforms, CRM systems, AI tools, and database technologies that help organizations operate more efficiently and scale effectively. Currently open to full-time roles, internships, freelance projects, and contract-based engagements.

TECHNICAL SKILLS

AI & Automation	n8n, Make, Zapier
CRM & Business Tools	HubSpot, Airtable, Notion, NocoDB
Programming	JavaScript (Automation & Workflow Development)
Databases	Supabase, PostgreSQL, MySQL, Pinecone
AI / LLM Technologies	OpenAI, ChatGPT, Google Gemini, Claude, Vapi
Platforms & Infrastructure	GitHub, Lovable, Oracle Cloud

FEATURED PROJECT PORTFOLIO

SMC RAG Agent

Project Overview

SMC RAG Agent is an AI-powered community moderation and support automation system designed for organizations operating on Telegram and WhatsApp. The system acts as a virtual moderator, responds to community inquiries, escalates critical issues to development teams, generates daily operational summaries, and automatically documents all activities for management review.

Technology Stack: n8n, Pinecone, ChatGPT LLMs

Demo: <https://www.loom.com/share/5ae45867a1ae44629c672c2ce9c991a3>

ClinicFlow — AI-Powered Clinic Automation System

Project Overview

ClinicFlow is a comprehensive healthcare automation platform that serves patients, staff, and management through a centralized dashboard. Patients can manage appointments, submit complaints, and provide feedback, while staff and management can monitor appointments, resolve patient concerns, and track healthcare operations. The system also integrates an AI-powered WhatsApp assistant that allows patients to communicate directly with the clinic, submit concerns, and receive support, with all interactions synchronized across the management dashboard.

Technology Stack: n8n, Pinecone Assistant, Green API, ChatGPT LLMs

Demo: <https://www.loom.com/share/8c5a00737a2849b7b839fa226da2af62>

AI Call Agent for an Eatery

Project Overview

This AI-powered call automation system handles incoming customer calls for restaurants and eateries. It manages food orders, reservations, customer inquiries, and complaints without requiring staff to answer every call. The solution converts voice conversations into structured text, automatically routes requests to the appropriate management or kitchen teams, and ensures businesses never miss valuable customer interactions.

Technology Stack: n8n, Vapi, Lovable, Google Sheets, Telegram

Demo: <https://www.loom.com/share/a46dc06d0280443f8137de7e0c8e930c>

PROFESSIONAL VALUE PROPOSITION

I help organizations automate repetitive processes, reduce operational bottlenecks, improve customer support workflows, and deploy AI-powered systems that scale with business growth. My work focuses on: AI Agents and Conversational AI Business Process Automation Customer Support Automation WhatsApp and Telegram Automation CRM and Database Integrations Retrieval-Augmented Generation (RAG) Systems Appointment and Workflow Management Systems AI-Powered Reporting and Escalation Systems

CONTACT & COLLABORATION

Let's Build Something Amazing Together

Whether you're looking to automate business processes, deploy AI-powered solutions, improve customer support systems, or streamline operations, I'd love to help.
