Hycraft Joshua

AI AUTOMATION SPECIALIST

Professional Overview

AI Automation Engineer focused on designing AI agents and workflow automations that remove manual work from business operations. I connect large language models (OpenAI, Claude, Gemini) with CRMs, databases, and communication platforms to build production-ready systems — from community moderation agents to healthcare coordination platforms to voice-driven customer support — that let teams operate with less manual overhead and faster response times.

Featured Projects

SMC RAG Agent

Automated community moderation and support across Telegram and WhatsApp, giving the team 24/7 response coverage without added headcount, and freeing human moderators to focus only on escalated, high-priority issues.

ClinicFlow — AI-Powered Clinic Automation System

Centralized patient, staff, and management workflows into one automated system with a WhatsApp-based AI assistant — cutting appointment-handling friction and giving the clinic a scalable support channel without additional staff.

AI Call Agent for a Restaurant without Staff Intervention

Eliminated missed calls and manual order-taking by automating reservations, orders, and inquiries end-to-end — ensuring every customer interaction is captured and routed correctly without a staff member answering the phone.

Career Objective

Seeking roles as an AI Automation Engineer, Workflow Engineer, or Business Process Automation specialist — building AI-driven systems that reduce operational overhead and scale support, sales, or internal operations. Open to full-time, contract, and automation-consulting engagements.
